

INSTITUTO DE
NEUROCIENCIAS
CASTILLA Y LEÓN

UBICACIÓN/LOCATION:

Laboratorio 15- INCYL

NOMBRE DEL LABORATORIO/GRUPO; RESEARCH GROUP NAME/ACRONYMS:

Neurobioquímica/Neurobiochemistry

Our lab is a consolidated research group recognized by the University of Salamanca (GIR Neurobiochemistry) and the Junta de Castilla y León (UIC013)

BREVE DESCRIPCIÓN DE LA LÍNEA DE INVESTIGACIÓN/ RESEARCH LINE

Our work mainly focuses on the role of glial cells in health and disease.

We study the cellular and molecular bases underlying important CNS pathologies in which astrocytes play an essential role.

We are interested in gap junctions and connexins, their molecular constituents. We showed that Src is involved in the molecular mechanism by which connexin43 reduces cell proliferation and glucose uptake. Based on this mechanism we have designed a cell-penetrating peptide with important antitumor effects in glioma stem cells. We are currently investigating the effect of these peptides (TAT-Cx43₂₆₆₋₂₈₃) in mouse ex vivo and in vivo models of malignant brain tumors.

INVESTIGADOR RESPONSABLE O PRINCIPAL DEL GRUPO/GROUP TEAM LEADER

Dr. Arantxa Tabernero

(Full Professor)

PERSONAL ADSCRITO/ GROUP MEMBERS

(indicar nombre completo y cargo o puesto que ocupa):

Dr. José M Medina Jiménez

(Emeritus Professor)

Dr. Ana Velasco Criado

(Lecturer)

Dr. Rocío Talaverón Aguilocho

(Postdoctoral Researcher; Usal)

Sara Gutiérrez Pelaz

(PhD student; JCyL fellowship)

Laura García Vicente

(PhD student; FPU fellowship)

Andrea Álvarez Vázquez

(PhD Student)
